

Workflow for Project Manager System

1. User Registration:

- Users register by providing their email.
- An email with a registration token is sent to the user.
- Users confirm registration by clicking the token link in the email.

2. Login:

- Users log in using their credentials.
- JWT is issued upon successful authentication.

3. Admin Operations:

- Admins log in and create new projects with details like name and description.
- Admins add users to projects, triggering an email notification to the users.

4. User Operations:

- Users view the projects they are assigned to.
- Users create and manage tasks (to-dos) for the projects.
- Users update task statuses (e.g., completed, pending).

5. Task Tracking:

- Admins can view and monitor the progress of tasks within the projects (e.g., number of completed and pending tasks).
